

Les qualités uniques de l'ozone

Unique ozone effects

RENFORCEMENT DU POUVOIR D'OXYDATION :

L'Ozone (O₃) régénère l'oxydation durant la neutralisation et la coloration. Cela permet au cheveu qui est devenu alacín à cause des produits de permanente, coloration et décoloration de retrouver un PH naturel de 5,5.

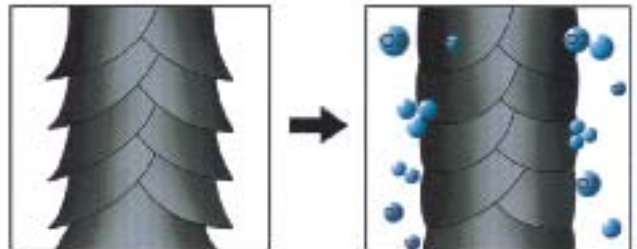

The short wave infrared rays deliver it's energy to the surface of hair strand. Not sufficient, weak processing power. The long wave infrared rays deliver it's energy to the core of hair strand. Deep penetration amazing promotion power, saving time.

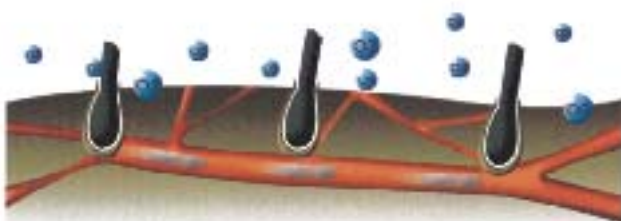

STÉRILISATION :

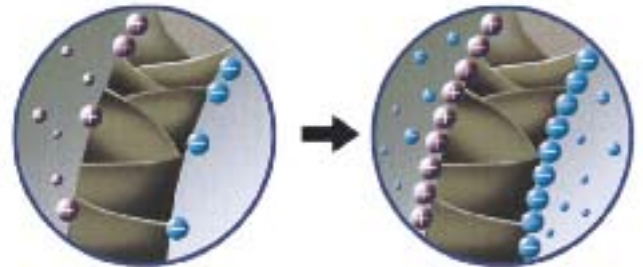

L'Ozone (O₃) détruit les germes et les bactéries.

L'Ozone ferme rapidement les cuticules des cheveux.

L'Ozone facilite la circulation sous-cutanée.

La couleur dure plus longtemps car l'Ozone produit un apport d'ions négatifs qui permettent aux produits de colorations de mieux adhérer aux cheveux et de ne pas être éliminés par un shampooing.

Les qualités des résistances céramiques "Infra long waves IR rays"

The long wave infrared rays/the short wave infrared rays

Les rayons "Infra longs wave IR rays" émis par le Royal Beauty Call :
 • amènent l'énergie au cœur même du cheveu.
 • permettent une profonde pénétration des produits au cœur des cheveux.

Alors que les rayons infra-rouges courts émis par les appareils classiques amènent l'énergie seulement en surface du cheveu et produisent peu d'amélioration durant les traitements.

Strong oxydation power they oxidize and break down organic compound during decomposition of ozone (O₃) sterilization ozone destroy strongly germs and bacteria promotion of blood circulation: deodorization / whitening / prevent from scalp itching and promotion of blood circulation.

Astringent air cuticles fresh ion effects : hairdrying process in the natural hair / supply fresh (-) ion to promote the ion combination the technological perfection quartz, ceramic, ozone and computer for a simple and effective use.

An optimized confort for the client, because there is no more articulated arm. The effect of infrared rays : beauty call ceramic heater can emit the short wave and the long term wave in infrared ray with the 90 % of the radiation rate; Especially the long term wave infrared ray, transmitted through a ceramic barc heater, allows for the maximum penetration of hair treatment solutions and compound the core of each hair strand, allowing for the best results. Ozone effect : ozone, composed of 3 atoms, is resolved easily by oxygen in the air and will promote to oxidize the damaged air.

Generally speaking, the air which is damaged and injured by chemical treatment solution permanent, dyeing, bleaching, coloring... can not be settled the normal condition in nature. In this case ozone helps to oxidize the air treatment fastly and easily and to reduce hair damages. Ozone helps to save the working time the professional hair stylist to achive the best results in minimum time. Ozone helps to prevent dandruff and scalp itching. Convergency operation by ozone effect. Ozone promotes greater blood circulation in the scalp, also help to maintain healthy hair.
